

LOSS CONTROL

The loss control staff at ARS has been working with self-funded workers' compensation trusts since 1981. Our staff currently works with a number of group pool clients, ranging from 80 to 600 members in group size. We also assist several additional individual self-insureds with their safety efforts.

The primary objective of our Loss Control Consultants is to assist you with developing a safety culture throughout your organization that promotes and fosters safe behavior. This is typically accomplished with a multi-faceted approach including management commitment, supervisor and employee safety training, policy development and facility inspections.

Our belief is that *management involvement and organizational accountability* for the safety effort are the primary elements necessary for any loss prevention program to be successful. Since National Safety Council studies indicate that unsafe acts are responsible for 85-95% of all accidents, while unsafe conditions are responsible for only 5-10%, management must initiate controls and programs that result in modifying the unsafe behavior of employees. When management sets the example and places the proper emphasis on safety, employees will learn that this is the expected behavior and begin to act accordingly.

ARS Loss Control Consultants also provide assistance with the following activities:

- **Top Management Involvement**
- **Supervisor and Safety Committee Involvement**
- **Safety Committees**
- **Safety Orientation**
- **Inspection Training**
- **On-Site Inspections**
- **Video Job Safety Observations**
- **Job Safety Analysis**
- **Accident Investigation**
- **Cost Containment**
- **Loss Control Bulletins**

We have success with providing motivation that works for all types of organizations! Once this is accomplished, the role of the loss control consultant becomes one of a true consultant who is called on for advice and assistance, instead of the more common role of trying to provide any and all safety motivation for the group.
